

TREX FENCING

Top Rail

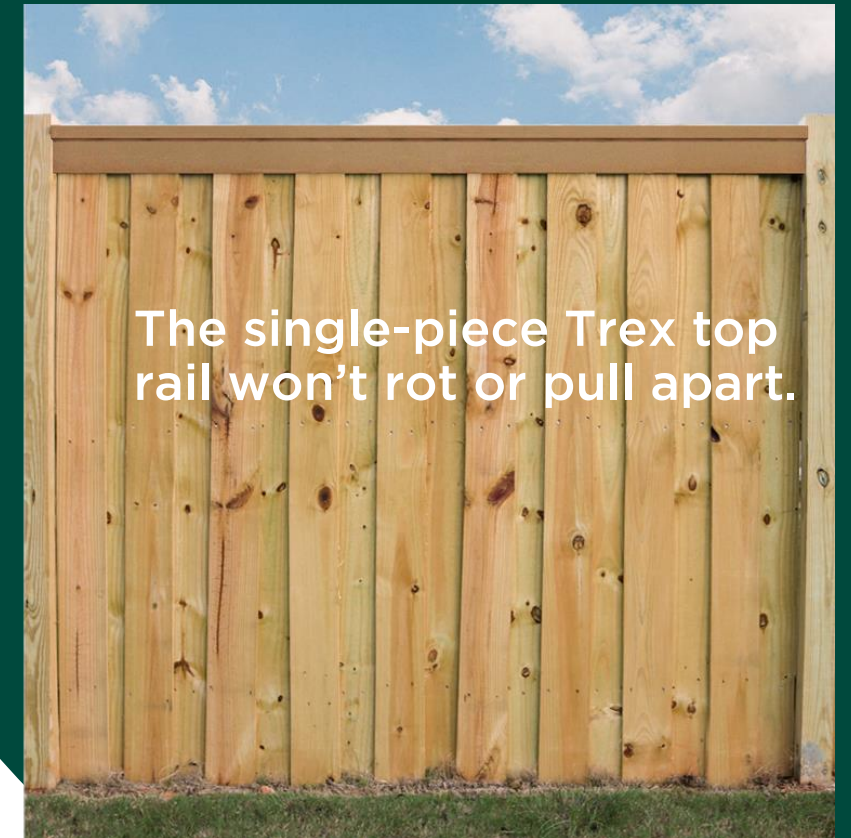

TREX FENCING COMPONENTS are made from durable, long-lasting composite material. Each component has a specific benefit that makes Trex Fencing uniquely suited for a variety of applications, *including the combination of Trex with other products.*

The T-shaped TREX TOP RAIL provides a cap for fencing pickets to help *protect them from the elements* and to *add an attractive trim.*

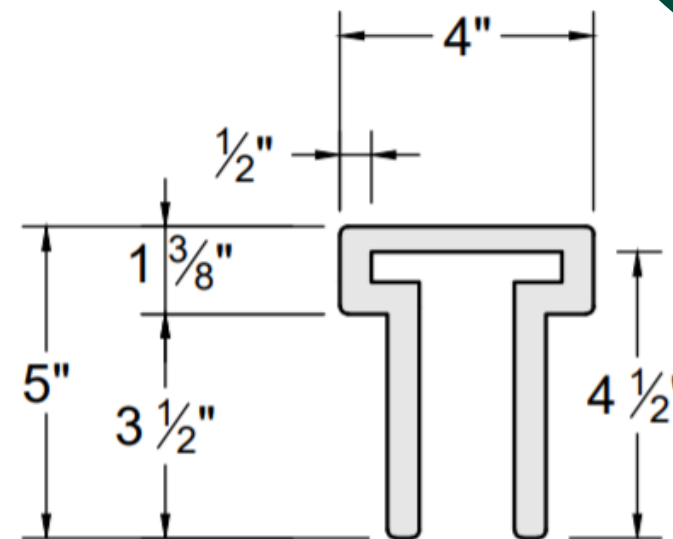

Consider *upgrading* your wooden top rails to Trex. Want a different color or shorter length? No problem. Like wood, *Trex can be painted and cut.*

Wood cap-and-trim rails rot, splinter and separate.

The single-piece Trex top rail won't rot or pull apart.

Trex top rails are nominally 91" in length.
